DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Siersch 9408066.

Siersch shows in fig. 3 an inclined illuminator type binocular stereomicroscope including left and right observation optical systems(11-13) and an illumination optical system(21) which has an optical axis inside a circle having a diameter connecting the optical axes of the observation systems (note the cross-section view along line A-B. Note that the illumination unit(21) includes bundled optical fibers which emit light from an external source.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Buhler 3909106.

Buhler shows in figs. 1 and 2 an inclined illuminator type binocular stereomicroscope including left and right observation systems(10,18-28) and an illumination optical system(16) which has an optical axis inside a circle having a diameter connecting the optical axes of the observation systems (see fig. 1). Note also zoom system(10) and the fiber bundle in the illumination unit(16).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Siersch.

Although not shown by Siersch, zoom systems for stereomicroscopes are well known in the art. Use of a known zoom system in Siersch's microscope would have been obvious at the time of invention in order to enable viewing with different magnifications.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Biber, Knoblich, Koetke, Tsumanuma et al, and Nakamura all show microscope illumination systems associated with circles having diameters connecting the observation systems.
